

Regulatory & Safety Data

Ensuring Patient Safety

The role the CSSD plays in protecting the patient from infection in the OR is paramount. Consequently there are many regulatory requirements that must be maintained and monitored. Software automation and Electronic Data Capture (EDC) provide continuous monitoring of the entire reprocessing cycle with reporting capabilities. Additionally, EDC eliminates the need to store paper versions of records that are required to be maintained for regulatory compliance reasons, while providing easy access to those records when needed.

Key Features:

- ✓ IUSS loads for specified time period including time, date, operator, and reason
- ✓ List of warnings issued to technicians who lacked a competency required to access a desired function
- ✓ Quality feedback tallies by event type
- ✓ When combined with ScopeTrac, additional reporting of endoscope reprocessing based on hang data is available
- ✓ Digital record keeping of sterilization loads allows for efficient search and review of all sterilization methods
