Job Title

Senior Software Engineer

Employment Status

Exempt

Reports to

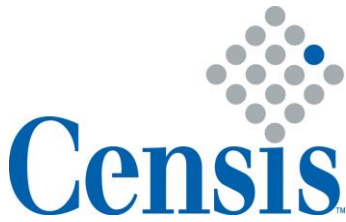

Senior Director of Application Development

Position Summary

The Senior Software Engineer is responsible for developing, maintaining and supporting software applications for Censis customers and the Censis Technologies staff. This individual plans and leads development projects, makes architectural decisions, establishes and meets project milestones, and mentors junior members of the development team.

Specific Responsibilities

- Suggest and implement continuous improvements in process and products to optimize services delivered to the customer and reduce costs for Censis
- Perform root cause analysis on software application issues and implement corrective actions to prevent recurrence
- Lead project team in the design, development, coding, testing and debugging of applications
- Coordinate the effective use of project teams' time to achieve milestones
- Maintain up-to-date technical knowledge and skills, acting as mentor and advisor for others on the development team
- Adhere to the standard process for software development life cycle, including developing prototypes
- Adhere to the change control process for upgrades of Censis products
- Design, build and test application enhancements and bug fixes
- Work with Quality Assurance staff to conduct thorough testing of changes prior to production release
- Provide support to Operations staff for customer implementations, and post-implementation support
- Provide support to Sales staff during the sales process
- Provide support and problem resolution to Censis Help Desk for escalated customer issues, including 24 x 7 on-call duty
- Provide support for technical needs of Censis staff
- Other duties and responsibilities as assigned
