Job Title

Quality Assurance Engineer

Employment Status

Exempt

Reports to

Software Quality Manager

Position Summary

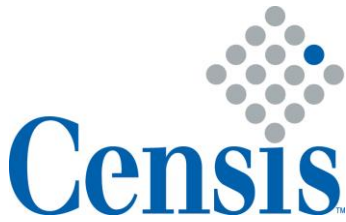

The Quality Engineer is self-motivated and results-oriented with hands-on experience in automated testing and deploying high quality test automation solutions in an Agile environment. You will work within the team's SDLC processes to create high quality systems and processes and will collaborate with the team to achieve the best possible results. The successful candidate will be responsible for driving forward our automated and manual QA processes to ensure consistently improving quality and efficiency. A strong candidate will have excellent problem-solving and critical thinking skills, along with the use of sound judgment.

Specific Responsibilities

- Identify manual and automated test requirements from specifications, map test case requirements and design test coverage plan.
- Develop, document and maintain functional test cases and other test artifacts like the test data, data validation, and automated scripts by using best-in-class practices.
- Administer and maintain automation scripts
- Execute and evaluate manual and automated test cases and report test results.
- Coordinate with Development to analyze all functional and non-functional requirements for automation test framework
- Hold and facilitate manual and automated test plan/case reviews with cross-functional team members.
- Identify any potential quality issues per defined process and escalate potential quality issues immediately to management.
- Ensure that validated deliverables meet functional and design specifications and requirements.
- Isolate, replicate, and report defects and verify defect fixes
- Suggest continuous improvements to Censis software applications to optimize services delivered to the customer
- Other duties and responsibilities as assigned

Qualifications

- Minimum 3-5 years Quality Engineering experience in Web and Mobile applications with a focus on automated testing
